Version: 1.0

Effective Date: 11. December 2025

Owner: Governance, Risk and Compliance (GRC) Manager

Purpose and Scope:

This document establishes a framework for measuring incident response effectiveness and driving Continuous Improvements of TechMed solution's incident response program.

1. Key Performance Indicators

This sections defines measurable KPIs for incident response program performance. The table below defines the different metrics we use and the purpose:

KPI	Definition	Purpose	Benchmark
MTTD	Meant Time to Detect: Average time from incident occurrence to detection	To establish our maturity level and detection capabilities in identifying incidents	Less than 30 minutes
MTTR	Mean Time to Respond: Average time from detection to initial response action	To establish our responsiveness and preparedness to act on incidents	Less than 30 minutes
MTTC	Mean Time to Contain: average time from detection to containment	Defines and measures efficiency in limiting incident impact	Less than one hour
MTTRec	Mean Time to Recover: average time from detection to full recovery	This defines the effectiveness of recovery processes and business continuity plans	Less than 24 hours
Incident Volume Trends	This defines overall number and types of incidents over time	This defines our security posture capability, assist in fine tuning our response and to tailor training needs and gaps	Continuous

False Positive Rate	This defines percentage of alerts that are not actual incidents.	Defines the level of integration and training for our security and alert tools	Continuous
Repeat Incidents	This are the number of incidents that are frequently identified to be of same type	Defines our response and training	Continuous
Percentage of Incidents Resolved within SLA	This defines the number of incidents resolved within our indicated timelines	Defines improvement opportunities	Continuous

2. **Metrics Collection and Reporting**

Data Sources:

Logs from SIEM, IT Helpdesk System, Endpoint Protection platforms, incident reports.

Collection Frequency:

Daily reviews of logs and incident response actions for real-time KPIs (MTTD, MTTR, MTTC).

Weekly summary reports for false positives and SLA compliance

Monthly trend analysis for incident volumes and recurring incident types.

Reporting:

Security Operations Dashboard: Live display of active incidents, response times and containment status

Quarterly Executive Reports: Summary of KPI Performance, trends and improvement recommendations.

Trend Analysis Charts: Visualization of Incident Types, frequency and response efficiency.

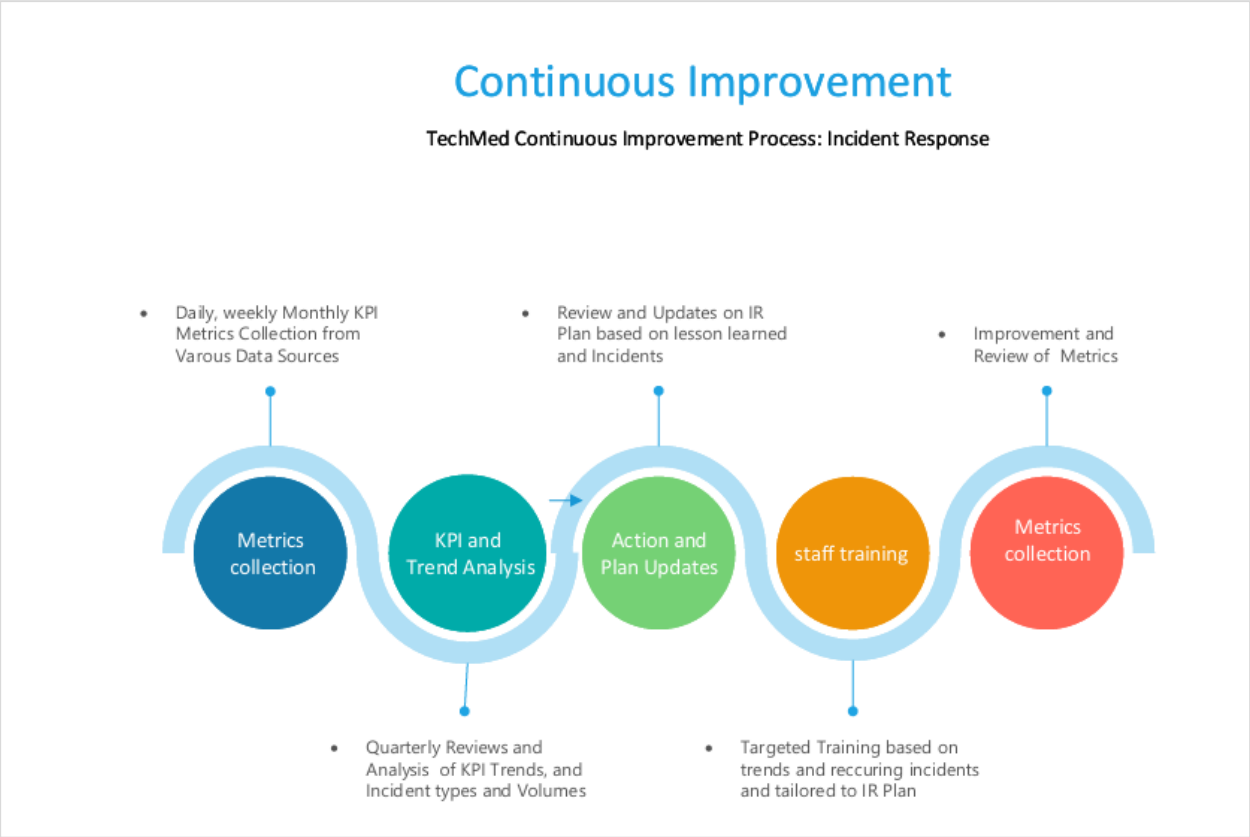
AD Hoc Emergency Reports: Generated on need basis for critical or high impact trends or incidents.

3. **Continuous Improvement**

This section established measures for continuous improvement:

a. Quarterly Reviews: Review and analyze KPIs trends, incident volumes and response effectiveness to identify gaps and opportunities for improvement.
b. Annual Exercises: Table top exercises, simulations or incident drills to test response readiness as well as validate our IR plans.
c. Incident Response plan update procedures: frequent revision and updates to IR plans based on lessons learnt incident and post-mortem reviews.
d. Training: Update staff training based on recurring issues or weakness and on lessons from recent incidents

Below flowcharts provides a visual representation of our continuous improvement process. It follows the cycle: Metrics collection, KPI and Trend Analysis, Action and Plan Updates, staff training back to metrics collections.



4. Program Maturity Assessment:

TechMed 's incident response program maturity is assessed using a five-level Capability Maturity Model. Current status: Stage 1-Initial. Strategic Objectives: Stage 5- Optimized within four years.

Maturity Stages:

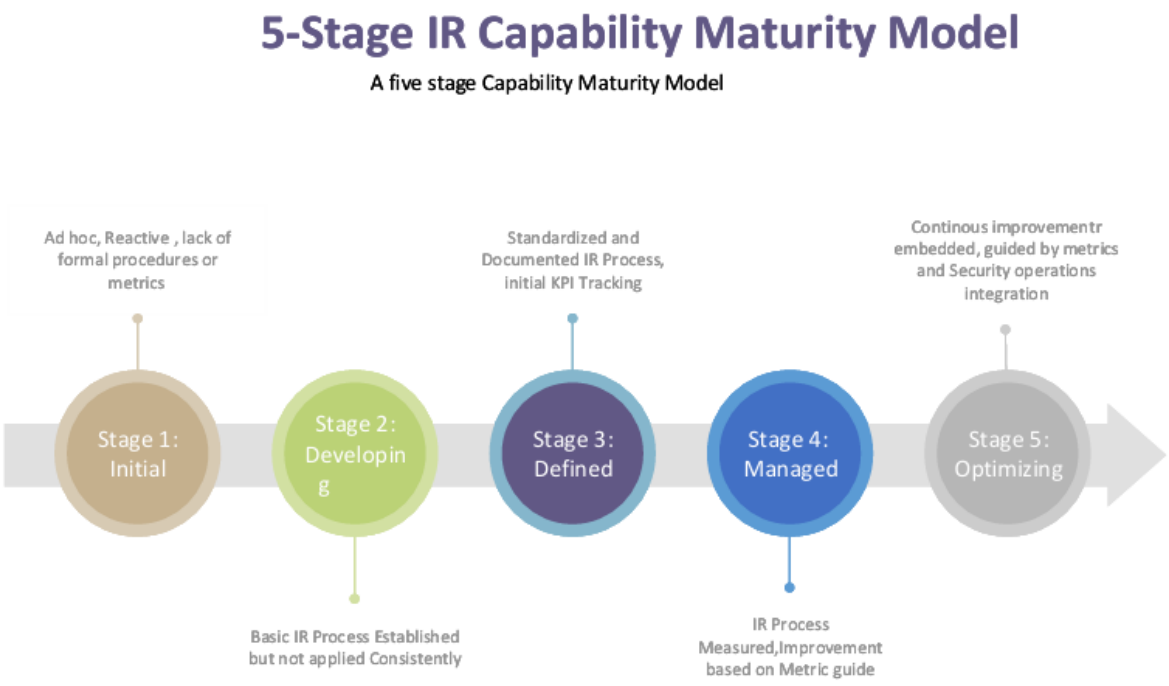
Stage 1: Initial: Incident Response plan is ad hoc and reactive, no formal procedures or metrics.

Stage 2: Developing: Basic Incident response process established but not consistently applied; little to no awareness among staff.

Stage 3: Defined: Standardized and documented IR process communicated to all relevant personnel; initial KPI Tracking begins.

Stage 4: Managed: IR Process are measured, monitored and controlled which guide operational improvement.

Stage 5: Optimizing Continuous improvement embedded in our IR process, with the process guided by metrics proactively with full integration with security operations.

Flowchart Overview:


The flowchart visualizes progression from stage 1 to stage 5 providing a roadmap for maturity advancement.
